Here are 4 things to know about your new **PESTBAN** equipped home:

1. Built-In Pest Control System

As part of your homes construction process, PESTBAN has "pre-wired" our specially designed polyethylene pest control tubing system through the walls of your home. This state of the art feature gives your home a centralized pest control delivery system that penetrates deep inside your homes wall voids.

2. Convenient Pest Control Service

Since the Pestban system is designed with an external service port, Pest Control Service can be performed entirely from the outside of your home! That means no appointment scheduling and no reason to stay home for service.

3. Effective

Treats household pests right where they hide and breed, IN THE WALLS!

4. Guaranteed Pest Control

Included with our Quarterly Pest Control Service, Pestban will retreat at no extra charge for the covered pests listed on your Pest Control Service Agreement.

NOTE: The Pestban Built-In Pest Control System and Service is not a treatment for termites. Termite Control Programs are a different and separate service which we also offer.

We look forward to starting your Quarterly Pest Control Service! Please call our office at 770-592-1121 to schedule an appointment and speak with a representative who can answer any questions.

Sincerely,

Al Forrette
General Manager

Scheduling Built-In Pest Control System *"Tube Rough-in"*

Please have the following information available:

- Your Company Name
- Subdivision and Lot #
- Street Address
- Square Footage
- If there is Temporary Power available
- If there is going to be a finished basement
- Any special circumstances

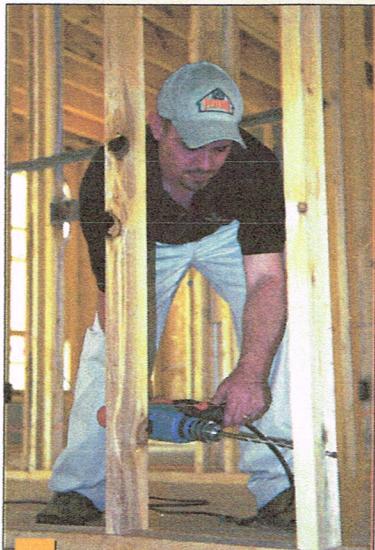

At Pestban, we strive for 100% on time performance. We will call you the day before your install is scheduled to confirm that everything is ready for our tubing system. If you are aware that there has been a delay and the job may not be ready as scheduled, please let us know and we will be glad to reschedule your install.

Built-In Pest Control System

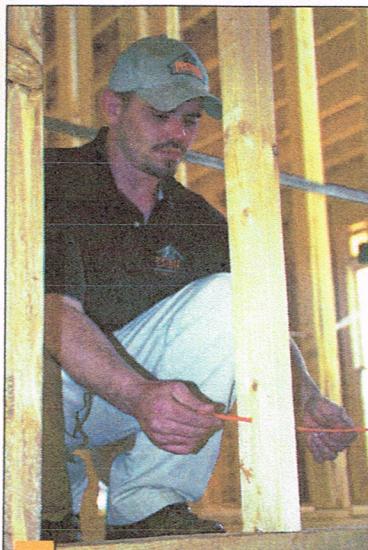

Thanks to your builder your home has been equipped with the latest, most effective, safest and convenient pest control system available today!

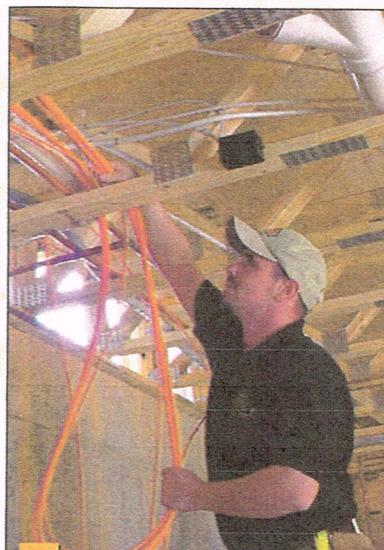

Installation Process

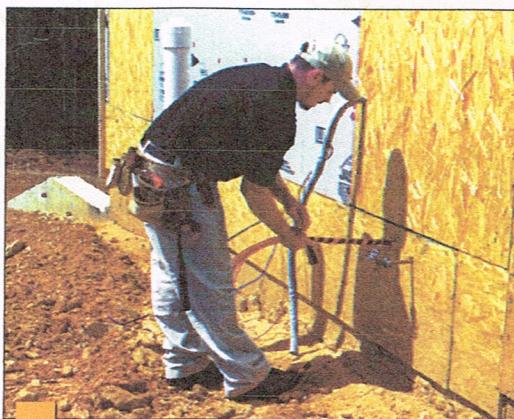

1 A specially trained Pestban technician begins the installation process by drilling holes to run the tube system.

2 Our technician runs a series of perforated tubing through the studs.

3 The perforated tubes are connected to non-perforated sections and run between the floor joists.

4 All the tubes are gathered and run through to the exterior.

5 The service port is attached to complete the installation.

Simply call our office today to activate your service and begin fighting the pests where they live!
